Roof Coatings

West Development Group

HSS 535 and HSS 540 R2R™ are one-component, moisture-curing silicone rubber roof coatings designed for use on sprayed-in-place polyurethane foam. They can be rolled or spray-applied, and touch up work can be done with a brush or roller. The coatings are tack-free within one to two hours and cure at normal temperatures in two to six hours by reacting with moisture in the air, forming a durable and flexible moisture-free seal.

THE TOP 10 PRODUCTS

In 2008, AS&U showcased some of the hottest products in the industry. Here is “number 9” from the 10 most requested, as determined by readers.
